DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 8 and 9 are rejected under 35 U.S.C. 102(a) as being anticipated by APPLICANT'S PRIOR ART (APA).

3. Regarding to claims 8 and 9, Figs.1 and 2 of APA discloses an apparatus / a method implementing a circuit logic in a field programmable device (FPD), the circuit logic containing a first sequential element (110) to be clocked by a first circuit clock (111) and a second base sequential element (120) to be clocked by a second circuit clock, the apparatus comprising: means for transitioning the first base sequential element to a next state after the occurrence of a transition on the first circuit clock (fig.2), transition to the next state of the first base sequential element being timed according to a global clock (fig.2); and means for transitioning the second base sequential element to a next state after the occurrence of a transition on the second circuit clock (fig.2), transition to the next state of the second base sequential element according to the global clock (fig.2).

ALLOWABLE SUBJECT MATTERS

4. Claims 1-7 are allowed.

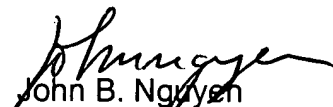

The following is an examiner's statement of reasons for allowance: the prior art fails to teach or fairly suggest a field programmable device (FPD) implementing a circuit logic containing a first base sequential element to be clocked by a first circuit clock and a second base sequential element to be clocked by a second circuit clock, the FPD comprises: a second modified sequential element to receive the global clock and the second circuit clock, the second modified sequential element containing the second base sequential element, the global clock being connected to a clock input of the second base sequential element, the second base sequential element transitioning to a next state only after occurrence of a transition on the second circuit clock and transition to the next state being timed according to the global clock as called for in claim 1.

Therefore, claims 1-7 are allowed.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. (See enclosed Form PTO-892).
